**Personal Statement - Han Htoo Aung**  
**Date - 18th May 2024**  
**To SIM Scholarship Admission Team,**

Information technology is such a fascinating major that it has become a fundamental part of the progress of society. In fact, cybersecurity is not only powerful for today's communities but also important in maintaining the existing websites and applications either for official or private use. In fact, the elegance of Information Technology today is pretty impressive in that it is not supporting civilizations visibly but helping us behind the scenes. Therefore, I would like to become a professional IT Engineer, especially as a Cyber cybersecurity engineer.

It is not only satisfying that I was accepted by SIM University, which is a leading institution in Singapore Education, but also exciting for me to become a university student and face new experiences in such a competitive environment. During my studies, I would like to learn both theoretically and practically so that I can apply my lessons in reality. Furthermore, I would like to build a strong foundation during my diploma course. I will study both lectures from SIM University and from the Internet. Eventually, regardless of having various branches and unlimited lessons in the IT field, I would like to pursue everything about IT even after my graduation.

During my academic career, I participated in most of the events, such as English and Mathematical competitions. Furthermore, I was once unexpectedly chosen as a scholarship student when I was in Grade 4. Additionally, I achieved outstanding student and disciplined student awards from Grade 1 to Grade 10. Regardless of dropping out from school after the Coronavirus Pandemic for some reasons, I will not give up my dream career. Hence, I decided to study GED and IELTS and passed them with good scores. Currently, I am studying information technology while studying the Thai language. For social activities, I usually play football either at school or at home on my own. Moreover, being one of the leaders of the class, I usually took responsibility for the cleanness, group projects, and other duties for the class. Eventually, I volunteered for a paralympic football team before the Coronavirus Pandemic, helping them during their training and other activities. Although I did not suffer from the virus, I assisted my neighbors during the Coronavirus Pandemic by bringing them food, oxygen tanks, and drugs.

Since I am a beginner in Information Technology, I do not have much experience with it. However, I am always curious about how codes and applications are related. Therefore, I search for a bunch of information via YouTube, Google, and websites like Freecodecamp and W3Schools. Furthermore, I try to comprehend HTML, CSS, and Python's functions, elements, and strings. Besides, I have built pages like a registration form, cafe menu, and gallery with the aid of Freecodecamp. However, with the lack of fundamental concepts, it is difficult for me to study on my own. Therefore, I am sure that professors from SIM University can encourage me to study Information Technology systematically and effectively.

Singapore is such a majestic country. It is improving at such a pace in every aspect. Therefore, its education system is constantly developing, leading the world's education system. Furthermore, Singapore Schools and Universities provide a great opportunity for enthusiasts and outstanding learners around the world to study safely

and efficiently. In fact, Singapore's education system is such a wonderful gardener that can grow beautiful flowers and vegetables for society.

While I am focusing on computing and cyber security, I would like to study further branches of information technology, such as cyber laws and the connection between technology and the real world, to become an excellent ethical hacker. In addition, as soon as I successfully finish my bachelor's degree, I would like to focus on the Master's and Ph.D. levels since these are my resolutions.

Furthermore, With a great passion for developing my nation, I would like to share my experiences and lessons throughout my journey with junior students and children for local improvements. Besides, I am willing to share my experiences with local communities to avoid unexpected scamming, cyber-attacks, and theft of personal information. Overall, it is my aspiration to construct a safe, dependable community for every human to continue their goals or protect their family.
